Experience

AnyLogic

Head of QA Team

10/2019 - Present

Hired as the QA Team leader to bring AnyLogic products quality to the next level I am solely responsible for the testing processes, planning, and team prosperity. I feel great pride in my job and together with my leadership tasks I engage in daily performing manual testing routines.

- Redefined company QA processes achieving a business goal of focusing on product stability and comprehensive quality control. Improved project workflows and Jira ticket culture.
- Significantly reduced the amount of issues escalated thru customer support.
- Conducted over 30 job interviews resulted in hiring of eminent QA engineers.
- Mentored junior QA engineers, held regular one-to-one check-ins, provided support and guidance helping the team to thrive. Improved onboarding process and documentation.
- Developed a set of automated API tests in Python.
- Coordinate new releases testing: issue triaging, optimal resource allocation and utilization.
- Work in close collaboration with development teams, participated in new feature design.
- Perform manual feature and bugfix testing, conducted regression testing.
- Constant testing documentation perfection.

ALM Works

QA Engineer

07/2018 - 10/2019

- Manual functional, regression and exploratory testing of web applications (add-ons for Jira).
- Analysis and test design for functionalities under test.
- Working with bugs: localization, creating bug reports, verification of fixes.
- Creating and maintenance of test documentation (check lists, mind maps, knowledge base) in English.
- Working in SCRUM team.

AnyLogic

QA Engineer

08/2014 - 07/2018

- Test planning, creating check-lists
- Manual testing of new functionality, regression testing
- Web application and desktop simulation modelling IDE testing
- Communication with developer team
- Participation in making of tasks list for the next release
- Introduced and maintained the testing process in the project (was solely responsible for all test activities)
- Initiated regular review of tasks lists for big releases that happened every 3-6 months in order to introduce necessary changes in the planned tasks and, as the result, significantly reduced the number of releases that were postponed due to unmet aims

Education

St. Petersburg State University, Saint Petersburg

Statistical Modelling, Applied Mathematics and Informatics
